

Agro-meteorological Bulletin and Assessment for Farmers and Livestock Producers of Trinidad and Tobago for the First Dekad (1st - 10th) of June, 2020

Definitions used in the forecast and bulletin:

Term	Meaning	
Dekad	10 day rainfall measuring period	
Rain Day	A day with 1.0 mm or more of rainfall amount	
Wet Day	A day with 10.0 mm or more rainfall amount	
Extremely Wet Day	A day with 25.0 mm or more of rainfall amount	
Normal Rainfall	Between 75% and 125% of the average	
Below Normal Rainfall	Rainfall below 75% of the average	
Above Normal Rainfall	Rainfall in excess of 125% of the average	
Much Below Normal Rainfall	Rainfall below 50% of the average	
Much Above Normal Rainfall	Rainfall above 150% of the average	
Scanty Rainfall	Less than 1 mm	
Moderate Rainfall	1-10 mm	
Heavy Rainfall	10-50 mm	
Very Heavy Rainfall	Greater than 50 mm	
Probability of 1-30 %	Low Chance	
Probability of 30-70 %	Moderate Chance	
Probability greater than 70 %	High Chance	
Term	Amount of Rain	Type of day
Scanty Rainfall	Less than 1 mm	Relatively dry day
Moderate Rainfall	1-10 mm	Relatively wet day
Heavy Rainfall	10-50 mm	Wet day
Very Heavy Rainfall	Greater than 50 mm	Excessively wet day

Weather Assessment for the period (21st-30th) of May 2020.

During the 21st to 30th of May, a mixture of relatively dry days, relatively wet days and wet days occurred over Trinidad and Tobago. Rainfall total maps for the period 21st to 30th of May are located below as figure 1 and figure 2.

Figure 4. Rainfall map of Tobago showing possible rainfall totals for varying districts during first dekad of June 2020 and percentage probability of occurrence.

Impacts on Agriculture:

During the first dekad of June 2020, relatively wet days are expected on the 1st, 2nd, 3rd, 4th, 9th and 10th, while wet days are expected on the 5th, 6th and 7th. There is a high (75%) probability that the anticipated rainfall will return significant soil moisture across Trinidad and Tobago. Rivers levels are likely to- increase as the rainy season progresses, while shrubs and grass-growth will continue at a faster pace. Additionally, with rising mean temperatures, there is a high (75%) probability for insects, pests and warm weather diseases to develop.

Sun and Moon positions in the sky:

The sun is presently at a latitude of approximately 22.0 degrees North -, and with this position, the day length for this dekad will be 12.6 hours. As Trinidad and Tobago is in the heat season, there is a high probability (80%) of intense solar radiation occurring during the first dekad of June 2020, when the sky is generally cloud free. There is also high probability (85%) of heat stress on a variety of plant seedlings and young/sick/elderly animals from direct exposure to solar radiation and high temperatures. Additionally, the full moon phase will be on the 5th June 2020. As a result, there will be medium to high moon illumination over crop fields and livestock at night during the dekad.

Summary:

During the first dekad of June 2020, relatively wet days are expected on the 1st, 2nd, 3rd, 4th, 9th and 10th, while wet days are expected on the 5th, 6th and 7th. On relatively wet days expect intermittent cloudy patches with a moderate probability (55%) of brief showers and on wet days expect cloudy periods with a moderate probability (70%) of light to
