## CariCOF Drought Outlook By the end of January 2023

Coordination: Caribbean Institute for Meteorology & Hydrology Dr. Cédric J. Van Meerbeeck - Climatologist Dr. Teddy Allen – Assistant Climatologist caricof@cimh.edu.bb

#### Participating territories

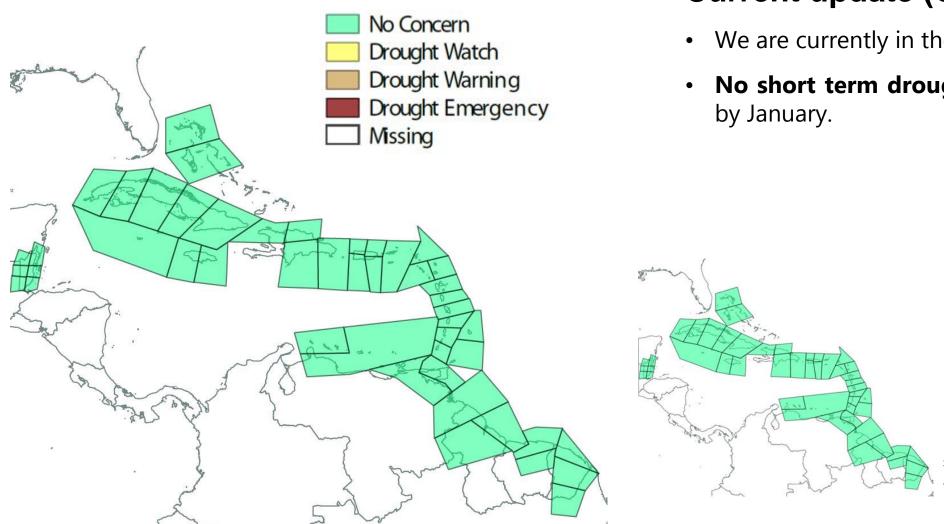

Antigua & Barbuda, Aruba, Bahamas, Barbados, Belize, Cayman Islands, Cuba, Curaçao, Dominica, Dominican Republic, French Guiana, Grenada, Guadeloupe, Guyana, Haïti, Jamaica, Martinique, Puerto Rico, St. Barth's, St. Kitts & Nevis, St. Lucia, St. Maarten/St-Martin, St. Vincent & the Grenadines, Suriname, Trinidad & Tobago and the US Virgin Islands

#### What is the predicted short term drought concern by the end of January 2023?

#### Current update (October 2022):

- We are currently in the wet season.
- No short term drought concern for the region

Previous update (September): short term drought alert levels at the end of December 2022

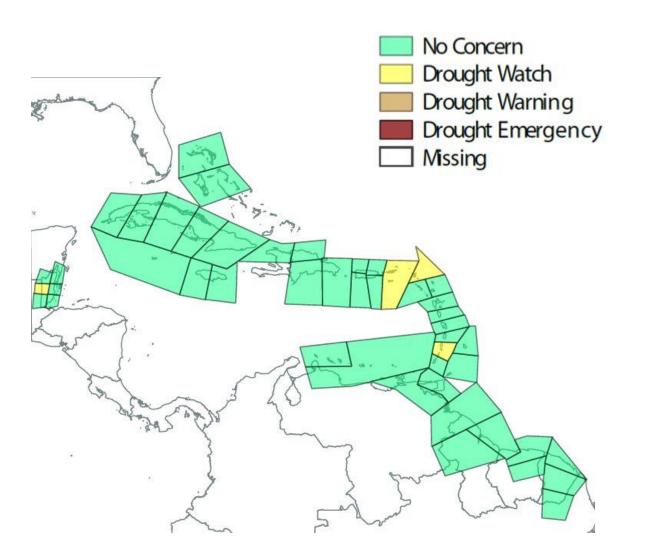

#### Short term drought alert levels at the end of January 2023

(updated October 2022 – based on a 6-month SPI for August to January 2022-'23)

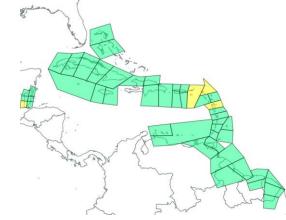

For climate information specific to your country, please consult with your national meteorological service. CariCOF outlooks speak to recent and expected climate trends across the Caribbean in general.

#### What is the predicted long term drought concern at the end of November 2022?

- This 12-month SPI-based drought outlook uses observations through September 2022, with potential impacts on large surface water reservoirs and groundwater. In general, impacts are expected if the 12-month SPI is ≤-1.3 (severely dry or worse – ref.: CDPMN).
- A drought watch should be considered for western Belize, Sint Maarten / St-Martin, St. Vincent, and the USVI.

Previous update (September): long term drought alert levels by the end of Nov 2022

## Long term drought alert levels at the end of November 2022

(updated October 2022 – based on a 12-month SPI for Dec 2021 to Nov 2022)

### **Drought outlook – shorter-/longer-term concern?**

- Current drought situation (up to the end of September 2022): (more information here)
  - Severe (or worse) short term drought has developed in Cuba and Saint Vincent.
  - Severe (or worse) long term drought has developed in Antigua, Western Cuba, southwest Haiti, eastern Jamaica, Martinique, Sint Maarten, and St. Vincent.
- Short-term drought situation (by the end of January 2023):
  - There is no concern for short term drought for the region at the end of January 2023.
- Long-term drought situation (by the end of November 2022):
  - Long term drought might possibly develop or continue in western Belize, Sint Maarten / St-Martin, St.
     Vincent, and the USVI.
  - Areas ending up in long term drought by the end of November may experience lower than usual water levels in large reservoirs, large rivers and groundwater, which would become a concern for the 2022-'23 dry season.

\* We advise all stakeholders to keep monitoring drought and look for our monthly updates.\*

# CONTINUE TO MONITOR & CONSERVE WATER !!

ALERT LEVEL	MEANING	ACTION LEVEL
NO CONCERN	No drought concern	<ul> <li>✓ monitor resources</li> <li>✓ update and ratify management plans</li> <li>✓ public awareness campaigns</li> <li>✓ upgrade infrastructure</li> </ul>
	Drought possible	<ul> <li>✓ keep updated</li> <li>✓ protect resources and conserve water</li> <li>✓ implement management plans</li> <li>✓ response training</li> <li>✓ monitor and repair infrastructure</li> </ul>
DROUGHT WARNING	Drought evolving	<ul> <li>✓ protect resources</li> <li>✓ conserve and recycle water</li> <li>✓ implement management plans</li> <li>✓ release public service announcements</li> <li>✓ last minute infrastructural repairs and upgrades</li> <li>✓ report impacts</li> </ul>
DROUGHT EMERGENCY caricof@cimh.edu.bb	Drought of immediate concern	<ul> <li>✓ release public service announcements</li> <li>✓ implement management and response plans</li> <li>✓ enforce water restrictions and recycling</li> <li>✓ enforce resource protection</li> <li>✓ repair infrastructure</li> <li>✓ report impacts</li> </ul>
