Flash flood potential associated with excessive rainfall* in Jan.-Feb.-Mar. 2024

Flash flood potential	Colour codes	Probability of excessive rainfall* event
EXTREMELY HIGH		>80%
HIGH		50-80%
		
		
MODERATE		20-50%
		
		
SLIGHT		10-20%
MARGINAL		0-10%

* excessive rainfall is defined here as at least 30 mm of rainfall within a 24-hour period

Probability of excessive rainfall for JFM 2024

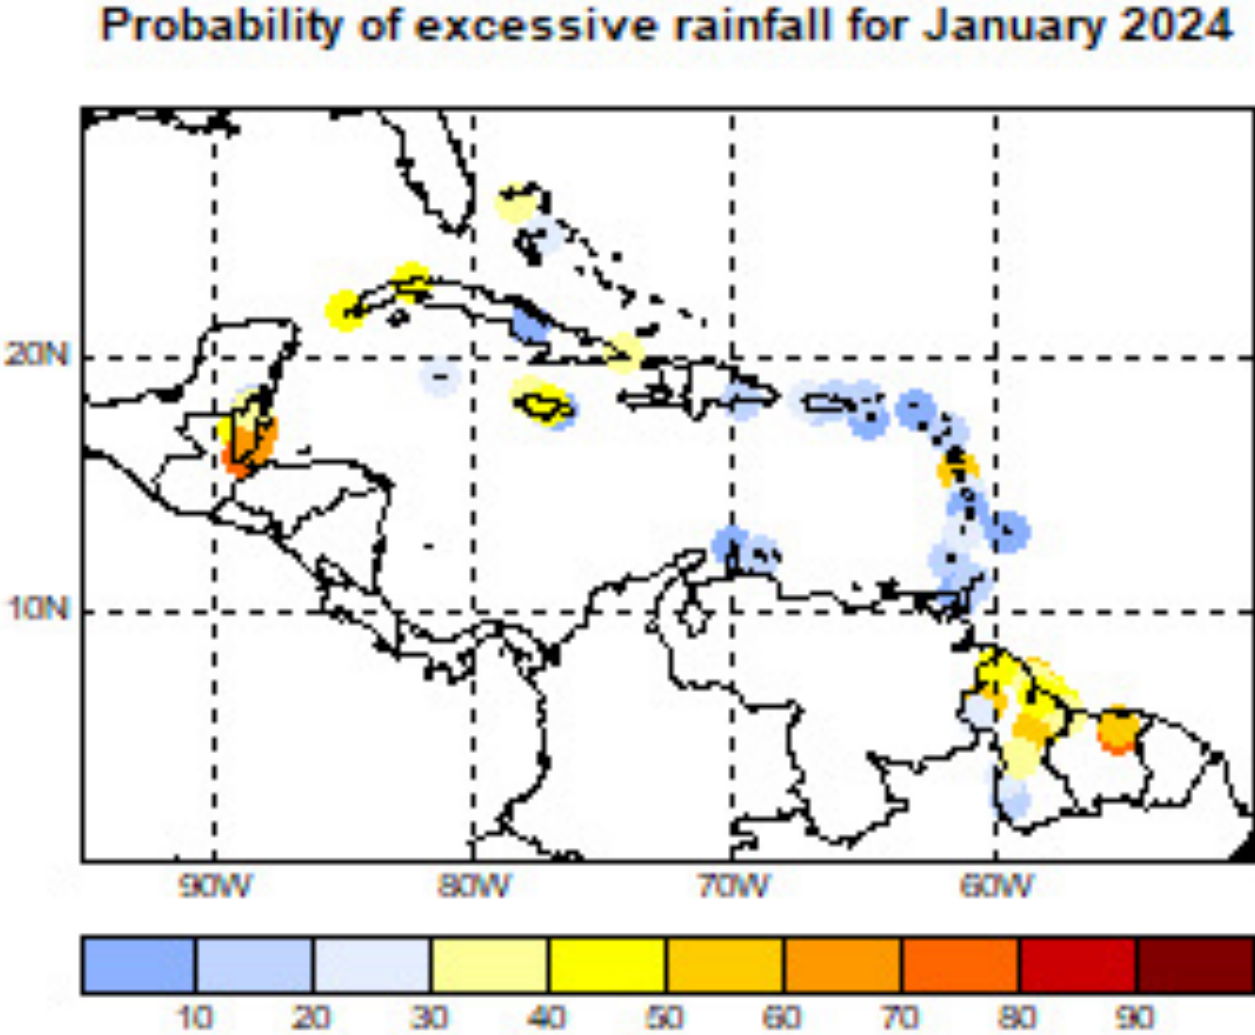

FORECAST: Extremely high flash flood potential in the Northern Bahamas; moderate to high potential in the Northwestern Bahamas, in Belize, the Greater Antilles, Dominica, the Guianas, and St. Vincent; marginal to slight potential elsewhere.

Flash flood potential associated with excessive rainfall* zooming in on **January 2024**

Flash flood potential	Colour codes	Probability of excessive rainfall* event
EXTREMELY HIGH		>80%
		
HIGH		50-80%
		
		
MODERATE		20-50%
		
		
SLIGHT		10-20%
MARGINAL		0-10%

* excessive rainfall is defined here as at least 30 mm of rainfall within a 24-hour period

FORECAST: Moderate to high flash flood potential in Belize, northern parts of the Guianas; moderate potential in The Bahamas, Cayman Is., Cuba, Jamaica; marginal to slight potential elsewhere.

**Regional climate data, information, tools,
experimental and operational products
are available at
rcc.cimh.edu.bb**

Coordination: Caribbean Institute for Meteorology & Hydrology
Contact: caricof@cimh.edu.bb
Authors: Dr. Cédric J. Van Meerbeeck – *Climatologist* (cmeerbeeck@cimh.edu.bb)
and Mrs. Janice Reid – *Intern (ClimSA)*

The prototype for this product was developed with the generous support
of the American People through the USAID funded BRCCC Programme in 2017.

Development Team: Dr. Cedric J. VAN MEERBEECK¹ (cmeerbeeck@cimh.edu.bb), Dr. Simon MASON²,
Dr. Hannah Nissan², Dr. Teddy ALLEN², Ms. Wazita Scott¹
