June 2026 Summary

June marked the beginning of the Atlantic Hurricane Season and featured a mix of weather conditions. The month was influenced by several tropical waves that brought periods of showers and thunderstorms, helping to alleviate the dry conditions that persisted in previous months. In addition, varying concentrations of Saharan dust-haze significantly reduced visibility and air quality on occasions. The total rainfall recorded at the **Argyle International Airport (A.I.A)** for July was **117.3 mm** (~4.61 inches). Island-wide, the highest monthly rainfall total was **335.9 mm** (~13.2 inches) recorded at the **Dallaway Station**.

Fig 1: Rainfall Stations

| KeyFig1 | Station-Location       | Rainfall (mm) |
|---------|------------------------|---------------|
| ●       | Argyle Int'l - Airport | 117.3         |
| ●       | E.T Joshua-Arnos Vale  | 101.8         |
| ●       | Belle Isle             | 192.4         |
| ●       | Rabacca                | 49.8          |
| ●       | Belmont Agri.          | 140.3         |
| ●       | Rivulet Climo.         | 78.5          |
| ●       | Dallaway               | 335.9         |
| ●       | Owia                   | 76.0          |

Tables 1&2: June, 2026: Rainfall across SVG.

The **highest maximum temperature**, 31.0°C, was recorded on the 10<sup>th</sup>; while the **lowest minimum temperature** was 20.6°C, recorded on the 16<sup>th</sup>.The **Average maximum temperature** was 30.0°C and **Average minimum temperature** was 23.6°C. **Average daily mean temperature** was 26.8°C.

The **maximum wind gust** for June is currently unavailable.

Forecast Information

| KeyFig1 | Station-Location      | Temperature (°C) |
|---------|-----------------------|------------------|
| ●       | E.T Joshua-Arnos Vale | 30.6-30.9        |

Table 3:Jul – Aug –Sept2026 usual range of temperature (between lower and upper threshold values)

National Temperature Outlook: Jul-Aug-Sept2026 for SVG

- **Air Temperature:** Day and night time temperatures are predicted to be above the usual. Frequent and possibly intense episodes of heat stress likely from August.
- **Sea Surface Temperatures (SSTs):** Sea surface temperatures around the Caribbean are warmer than usual.

| KeyFig1 | Station-Location      | Rainfall (mm) |
|---------|-----------------------|---------------|
| ●       | E.T Joshua-Arnos Vale | 432.7 –496.8  |

Table 4: Jul-Aug-Sept 2026 usual range of rainfall (between lower and upper threshold values) .

National Rainfall Outlook:Jul-Aug-Sept 2026 for SVG

- Rainfall is likely to be the usual or below.
- Drought conditions are no longer a concern for SVG

Advisory Statements

**Water:** With the onset of the wet/hurricane season, CWSA’s water storage intakes would be filled. However, heavy rainfall can cause water contamination. During times of water disruptions due to the passage of weather systems, residents should be advised to store adequate quantities of water for usage.

**Health:** As warmer than usual temperatures are expected in the upcoming months, the general public is advised to remain hydrated during warm days. Saharan dust events may persist; therefore, attention should be placed on monitoring and providing timely updates to reduce the risk of exacerbations of respiratory illness in vulnerable individuals. Additionally, because warmth and localized rain favours mosquito breeding, fogging operations should continue to mitigate vector-borne diseases.

**Agriculture:** Farmers should pay attention to weather bulletins in the months ahead and secure their equipment, crops and livestock as necessary. Irrigation measures should be practice as there could be periods of little to no rainfall. Due to the predicted warmer than usual temperatures, farmers are also advised to remain hydrated while working outdoors and provide adequate water and shading for seedlings and livestock during warm days.

**Tourism:** With the start of the wet/hurricane season, outdoor activities may be disrupted at times due to an increase in rainfall activity. During warm days, visitors should remain hydrated and be mindful to minimize skin exposure and wear sunscreen protection. Avoid the frequent rough sea swells during this time of the year. Visitors should also be aware of the frequency of Saharan dust episodes during this period as it can pose respiratory concerns.
