

Wet days and Wet spells Outlook September to November 2026

—

Rainfall frequency and extreme forecasts

Coordination – CIMH – Dr. Cédric J. Van Meerbeeck
caricof@cimh.edu.bb

Participating territories

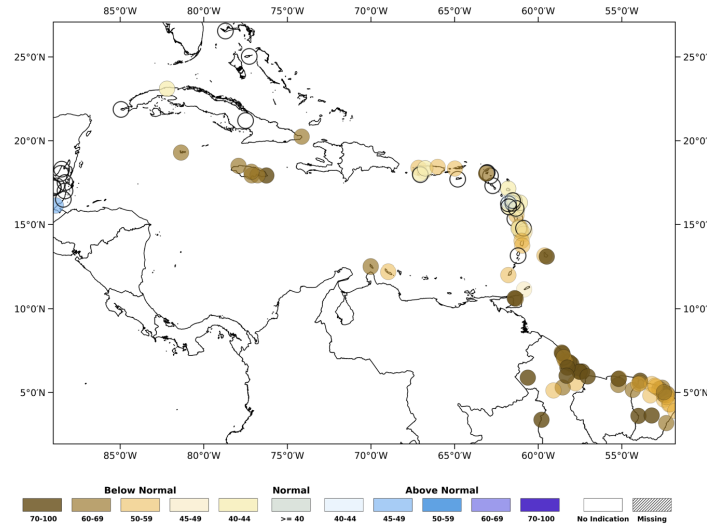

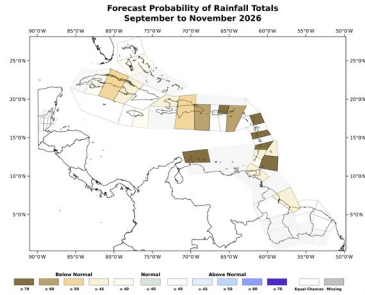

Antigua & Barbuda, Aruba, Bahamas, Barbados, Belize, Cayman Islands, Cuba, Curaçao, Dominica, Dominican Republic, French Guiana, Grenada, Guadeloupe, Guyana, Haïti, Jamaica, Martinique, Puerto Rico, St. Barts, St. Kitts & Nevis, St. Lucia, St. Maarten/St. Martin, St. Vincent & the Grenadines, Suriname, Trinidad & Tobago and the US Virgin Islands

Wet day frequency shifts

September-October-November (SON) 2026

Frequency of wet days in SON 2026

USUALLY: Out of 91 days in Sep-Oct-Nov, there are about 35 to 50 wet days (coastal Guianas: 20-35; ABC Islands: 10-20).

FORECAST: Rainfall totals in SON are *likely* to be the usual or less across most of the region.

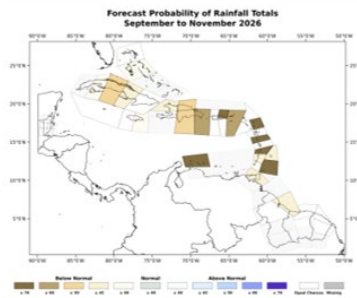

- Fewer wet days than usual are forecast across the Guianas (*high confidence*), the Antilles (*medium to high confidence*), but no robust signs of unusual numbers in northern parts of the Bahamas or in Belize (*low confidence*).

IMPLICATIONS:

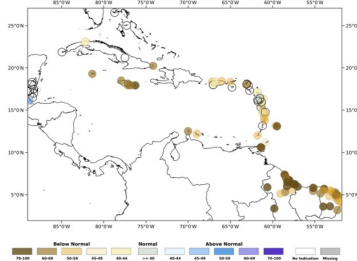

- Fewer outdoor activity disruptions than usual and increased wild-fire potential due to infrequent rainfall across the Guianas.
- The annual peak in rainfall disruptions is *likely* to be subdued in the Antilles.
- Surface wetness with consecutive wet days would make environmental conditions more conducive to moisture-related pests across Belize and the islands, though the forecast risk is somewhat reduced.

Wet spells frequency shifts

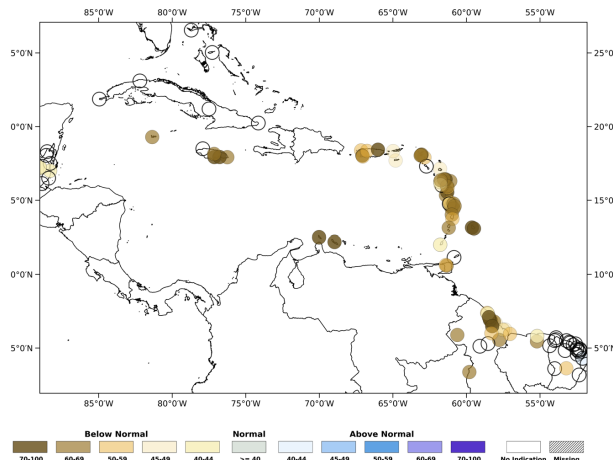

September-October-November (SON) 2026

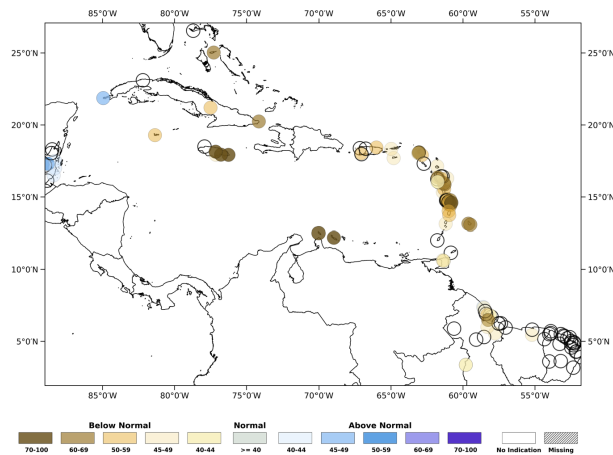

Wet days outlook

SON 2026 frequency of 7-day wet spells

SON 2026 frequency of 7-day very wet spells

USUALLY: Between 3 and 6 wet spells (coastal Guianas: 1-3) occur from September to November, with 1 to 4 of them ending up very wet (coastal Guianas: up to 2).

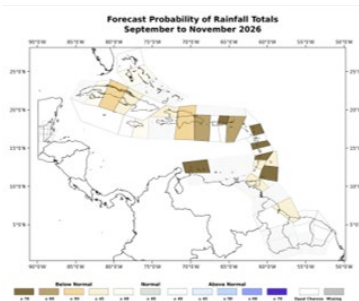

FORECAST: Rainfall totals in SON are likely to be the usual or less across most of the region.

- Fewer wet spells and very wet spells than usual along the Caribbean Islands (*medium to high confidence*), except the Bahamas and Cuba the forecast shows little indication (*low confidence*).
- A slightly lower number of wet spells and very wet spells is forecast for Guianas (*low confidence*).

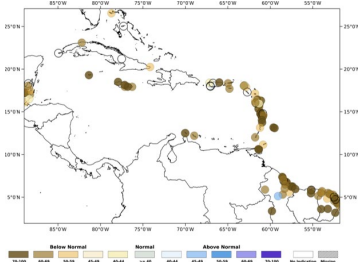

IMPLICATIONS:

- Slower than usual recharge of large water reservoirs and soil moisture in most Caribbean islands in view of the lower than usual number of wet spells during the late wet season.
- Fewer than usual very wet spells in most islands translates to less frequent surface water runoff.
- The chance of recurrent very wet spells translates to flood potential (1) being *moderate to high* in Belize and the islands; (2) *moderate* in the Guianas.

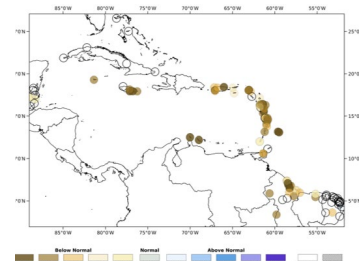

Precipitation outlook

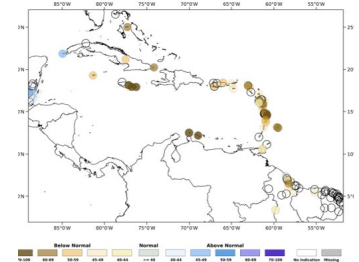

Wet days outlook

Wet spells outlook

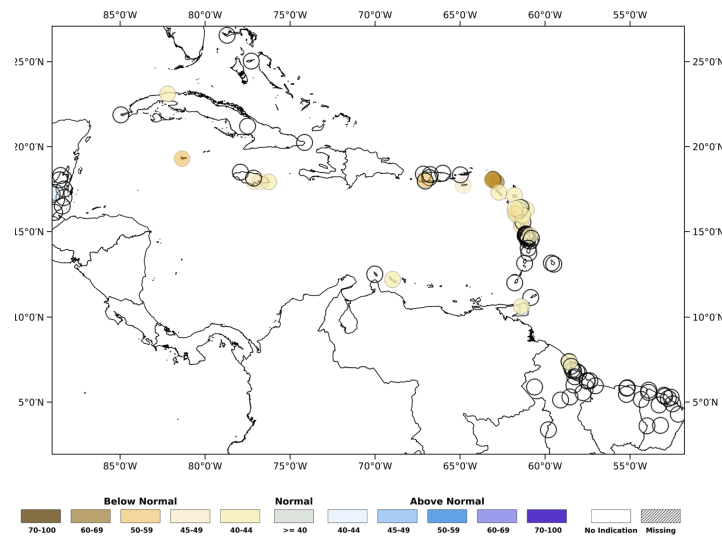

Very wet spells outlook

Extreme wet spells frequency shifts September-October-November (SON) 2026

SON 2026 frequency of *extreme (top 1%) 3-day wet spells*

USUALLY: Up to 2 extreme wet spells occur from September to November, except in the Guianas where it is the dry season.

FORECAST: Rainfall totals in SON are *likely* to be the usual or less across most of the region.

- Slight decrease*** from the usual chance of occurrence of extreme wet spells in parts of the Greater Antilles – e.g., Grand Cayman, parts of Cuba, Jamaica, Curaçao –, the Leeward Islands, Dominica, Martinique, Trinidad and St. Croix (*low to medium confidence*).

IMPLICATIONS:

- The chance for one or more extreme wet spells in Belize and the islands translates to ***high*** potential for flash floods and associated hazards.
- Limited to moderate*** flash flood potential in the Guianas which will be in their long dry season through mid- to late-November.

**Regional climate data, information, tools,
experimental and operational products
are available at**

<https://rcc.cimh.edu.bb>

Coordination: Caribbean Institute for Meteorology & Hydrology
(CIMH)
Contact: caricof@cimh.edu.bb
Author(s): Dr. Cédric J. Van Meerbeeck – *Climatologist*
(cmeerbeeck@cimh.edu.bb)

The prototype for this product was developed in 2015 through a partnership between the CIMH and Columbia University's International Research Institute for Climate and Society (IRI), with the generous support of (1) the American People through the USAID funded HED Programme.

Development Team: Dr. Cedric VAN MEERBEECK, Dr. Teddy Allen, Dr. Simon MASON, Dr. Ángel MUÑOZ, Dr. Wazita SCOTT, Dale DESTIN
