

HIGHLIGHTS: As the Atlantic Hurricane Season continues (June 01st –November 30th), residents of St. Vincent and the Grenadines are urged to closely monitor official weather updates and forecasts. Be prepared! View various bulletins and outlooks issued by the Caribbean [Regional Climatic Centre](#) (Health, Agriculture, Heat Outlook etc.) Read the Caribbean Agro-Climatic bulletin of [CarisAM](#) and other national bulletins.

August 2026 Summary

Saharan dust concentrations occasionally reduced visibility and diminished air quality. Several tropical waves along with Tropical Storm Dolly traversed the region during August, producing increased cloudiness, occasional showers, thunderstorms and brief periods of gusty winds. The total rainfall recorded at the **Argyle International Airport (A.I.A)** for August was **145.6 mm** (~5.72 inches). Island-wide, the highest monthly rainfall total was **375.0 mm** (~14.7 inches) recorded at the **Montreal Station**.

Fig 1: Rainfall Stations

KeyFig1	Station-Location	Rainfall (mm)
●	Argyle Int'l - Airport	145.6
●	E.T Joshua-Arnos Vale	102.1
●	Belle Isle	162.1
●	Rabacca	22.1
●	Belmont Agri.	167.8
●	Rivulet Climo.	97.7
●	Dallaway	371.9
●	Owia	49.2

Tables 1&2: August, 2026: Rainfall across SVG.

The **highest maximum temperature**, 31.6°C, was recorded on the 01st; while the **lowest minimum temperature** was 21.9°C, recorded on the 17th.The **Average maximum temperature** was 30.5°C and **Average minimum temperature** was 24.2°C. **Average daily mean temperature** was 27.3°C.

The **maximum wind gust** for August is currently unavailable.

Forecast Information

Table 3:Sept – Oct –Nov2026 usual range of temperature (between lower and upper threshold values)

National Temperature Outlook: Sept-Oct-Nov2026 for SVG

- **Air Temperature:** Day and night time temperatures are predicted to be above the usual. Frequent and possibly intense episodes of heat stress likely over the upcoming months.
- **Sea Surface Temperatures (SSTs):** Sea surface temperatures around the Caribbean are warmer than usual.

KeyFig1	Station-Location	Rainfall (mm)
●	E.T Joshua-Arnos Vale	672.2-804.4

Table 4: Sept-Oct-Nov 2026 usual range of rainfall (between lower and upper threshold values) .

National Rainfall Outlook:Sept-Oct-Nov 2026 for SVG

- Rainfall is likely to be the usual or below.
- There is a potential for drought conditions to develop across SVG during the upcoming months

Advisory Statements

Water: The general public should be aware that water availability may be disrupted during the passage of weather Systems. During these disruptions, residents are advised to store adequate quantities of water

Health: As warmer than usual temperatures are expected to continue in the upcoming months, the general public is advised to remain hydrated during warm days. Saharan dust events may persist; therefore, attention should be placed on monitoring and providing timely updates to reduce the risk of exacerbations of respiratory illness in vulnerable individuals. Additionally, because warmth and localized rain favours mosquito breeding, fogging operations should continue to mitigate vector-borne diseases.

Agriculture: Farmers should pay attention to weather bulletins in the months ahead and secure their equipment, crops and livestock as necessary. Irrigation measures should be practice as there could be periods of little to no rainfall. Due to the predicted warmer than usual temperatures, farmers are also advised to remain hydrated while working outdoors and provide adequate water and shading for seedlings and livestock during warm days.

Tourism: Outdoor activities could be disrupted at times during rainfall activity. During warm days, visitors should remain hydrated and be mindful to minimize skin exposure and wear sunscreen protection. Avoid the frequent rough sea swells during this time of the year. Visitors should also be aware of the frequency of Saharan dust episodes during this period as it can pose respiratory concerns.
