

Wet days and Wet spells Outlook November 2026 to January 2027

—

Rainfall frequency and extreme forecasts

Coordination – CIMH – Dr. Cédric J. Van Meerbeeck
caricof@cimh.edu.bb

Participating territories

Antigua & Barbuda, Aruba, Bahamas, Barbados, Belize, Cayman Islands, Cuba, Curaçao, Dominica, Dominican Republic, French Guiana, Grenada, Guadeloupe, Guyana, Haïti, Jamaica, Martinique, Puerto Rico, St. Barts, St. Kitts & Nevis, St. Lucia, St. Maarten/St. Martin, St. Vincent & the Grenadines, Suriname, Trinidad & Tobago and the US Virgin Islands

Wet day frequency shifts

November-December-January (NDJ) 2026-27

Frequency of wet days in NDJ 2026-27

USUALLY: Out of 92 days in Nov-Dec-Jan, there are usually about 35 to 50 wet days (coastal Guianas: 30-55; ABC Islands: 20-45).

FORECAST: Considerable uncertainty with respect to rainfall totals in NDJ 2026-27 across Belize and most of the islands, but there is a strong tendency towards wetter and drier than usual in the far northwest and south of the region, respectively.

- Fewer wet days than usual are forecast in Puerto Rico, the Lesser Antilles (*low to medium confidence*), the ABC Islands and the Guianas (*medium to high confidence*).
- More wet days than usual in The Bahamas, Western Cuba (*high confidence*), Grand Cayman, Jamaica (*low confidence*).

IMPLICATIONS:

- Fewer outdoor activity disruptions than usual and increased wildfire potential due to infrequent rainfall across the Guianas and ABC Islands in view of anticipated failure of wet season rains.
- Rainfall disruptions *likely* somewhat subdued in the Antilles from Puerto Rico south and eastwards.
- Increased wet day frequency in the early dry season reduce surface dryness somewhat in the northwest Caribbean, resulting in reduced wildfire risk.

Wet spells frequency shifts

NDJ 2026-27 frequency of 7-day wet spells

- **Fewer wet spells and very wet spells than usual in Greater and Lesser Antilles locations south of 20°N (*low to medium confidence*)**
- **More wet and very wet spells in the far northwest of the region (*low to medium confidence*).**

- Slower than usual recharge of large water reservoirs and soil moisture, as well as less frequent surface water runoff through the end of the Wet Season in the southeastern half of the Caribbean (particularly the ABC Islands & Guianas), followed by faster reservoir depletion in the early dry season.
- Slower reservoir depletion is forecast for the far northwest Caribbean during a potentially less intense early dry season.
- The chance of recurrent very wet spells translation to flood potential is *moderate to high*.

Precipitation outlook

Extreme wet spells frequency shifts

November-December-January (NDJ) 2026-27

NDJ 2026 frequency of extreme (top 1%) 3-day wet spells

Wet days outlook

Wet spells outlook

Very wet spells outlook

USUALLY: Up to 2 extreme wet spells occur from November to January (Belize and the Greater Antilles up to 1).

FORECAST: Considerable uncertainty with respect to rainfall totals in NDJ 2026-27 across Belize and most of the islands, but there is a strong tendency towards wetter and drier than usual in the far northwest and south of the region, respectively.

- *Slight decrease* from the usual chance of occurrence of extreme wet spells in the ABC Islands, Grand Cayman, the Leeward Islands, the coastal Guianas and Puerto Rico (*low to medium confidence*).
- *Increased* occurrence in southern and central Belize.

IMPLICATIONS:

- The chance for one or more extreme wet spells in Belize and the islands translates to *high* potential for flash floods and associated hazards.
- Only *slight to moderate* flash flood potential in the Guianas thanks to anticipated failure of wet season rains.

grey none are expected, light blue an increase, brown is a decrease in frequency,

**Regional climate data, information, tools,
experimental and operational products
are available at**

<https://rcc.cimh.edu.bb>

Coordination: Caribbean Institute for Meteorology & Hydrology
(CIMH)
Contact: caricof@cimh.edu.bb
Author(s): Dr. Cédric J. Van Meerbeeck – *Climatologist*
(cmeerbeeck@cimh.edu.bb)

The prototype for this product was developed in 2015 through a partnership between the CIMH and Columbia University's International Research Institute for Climate and Society (IRI), with the generous support of (1) the American People through the USAID funded HED Programme.

Development Team: Dr. Cedric VAN MEERBEECK, Dr. Teddy Allen, Dr. Simon MASON, Dr. Ángel MUÑOZ, Dr. Wazita SCOTT, Dale DESTIN
