SVG MONTHLY CLIMATIC BULLETIN

Issue 11 November 2026

HIGHLIGHTS: We are currently in the latter Atlantic Hurricane Season months. Residents of St. Vincent and the Grenadines are continuously advised to monitor official weather updates and forecasts. Be PREPARED! View various bulletins and outlooks issued by the Caribbean Regional Climatic Centre (Health, Agriculture, Heat Outlook etc.) Read the Caribbean Agro-Climatic bulletin of CariSAM and other national bulletins.

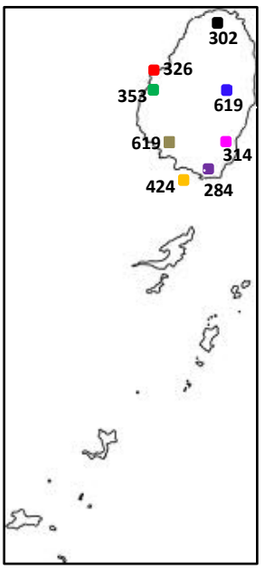

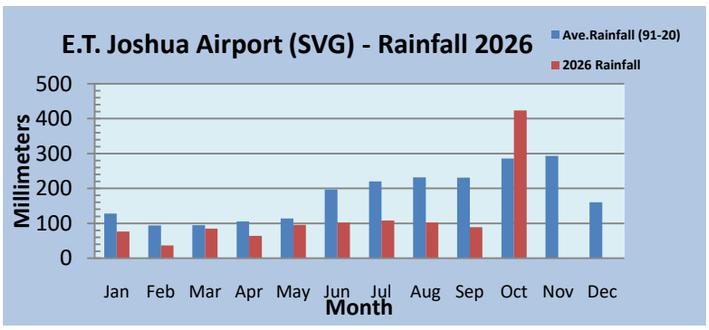

Fig 1: Rainfall Stations

October Summary

A tropical wave affected St. Vincent and the Grenadines during the first week of October, bringing periods of moderate to heavy showers and thunderstorms. The system intensified on October 6, producing significant rainfall that resulted in flash flooding, landslides and river overflows across mainland St. Vincent. Saharan dust also affected the islands at intervals throughout the month, contributing to hazy conditions and reduced visibility. The total rainfall recorded at the **Argyle International Airport (A.I.A)** for August was **314.3 mm** (~12.35 inches). Island-wide, the highest monthly rainfall total was **793.4 mm** (~31.2 inches) recorded at the **Richmond vale Climo Station**.

KeyFig1	Station-Location	Rainfall (mm)
●	Argyle Int'l - Airport	314.3
●	E.T Joshua-Arnos Vale	423.5
●	Belle Isle	353.1
●	Rabacca	619.0
●	Belmont Agri.	325.8
●	Rivulet Climo.	284.2
●	Dallaway	619.0
●	Owia	302.2

Tables 1&2: October 2026: Rainfall across SVG.

The **highest maximum temperature**, 32.2°C, was recorded on the 23rd; while the **lowest minimum temperature** was 20.6°C, recorded on the 9th. The **Average maximum temperature** was 30.9°C and **Average minimum temperature** was 23.9°C. **Average daily mean temperature** was 27.4°C.

The **maximum wind gust** for October is currently unavailable.

Forecast Information

KeyFig1	Station-Location	Temperature (°C)
●	E.T Joshua-Arnos Vale	29.7-30.0

Table 3: Nov – Dec – Jan 2026 -27 usual range of temperature (between lower and upper threshold values)

National Temperature Outlook: Nov-Dec-Jan 2026-27 for SVG

- **Air Temperature:** Day and night time temperatures are predicted to be above the usual.
- **Sea Surface Temperatures (SSTs):** Sea surface temperatures around the Caribbean are warmer than usual.

KeyFig1	Station-Location	Rainfall (mm)
●	E.T Joshua-Arnos Vale	478.2-599.9

Table 4: Nov – Dec – Jan 2026 -27 usual range of rainfall (between lower and upper threshold values) .

National Rainfall Outlook: Nov-Dec-Jan 2026-27 for SVG

- Rainfall forecast indicates little information on expected probabilities.
- There is a potential for drought conditions to develop across SVG during the upcoming months

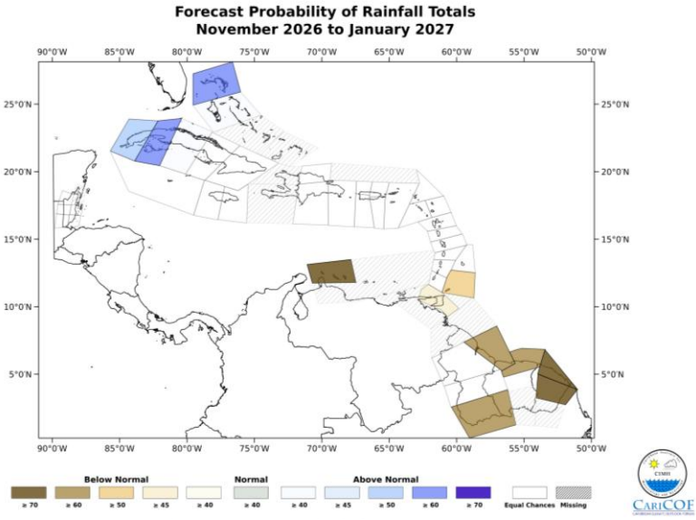

Fig 2: Regional Precipitation Outlook for Nov-Dec-Jan 2026-27

Advisory Statements

Water: The general public should be aware that water availability may be disrupted during the passage of weather Systems. During these disruptions, residents are advised to store adequate quantities of water

Health: As warmer than usual temperatures are expected to continue in the upcoming months, the general public is advised to remain hydrated during warm days. Saharan dust events may persist; therefore, attention should be placed on monitoring and providing timely updates to reduce the risk of exacerbations of respiratory illness in vulnerable individuals. Additionally, because warmth and localized rain favours mosquito breeding, fogging operations should continue to mitigate vector-borne diseases.

Agriculture: Farmers should continue to pay attention to weather reports and bulletins and secure their equipment, crops and livestock as necessary. Irrigation measures should be practice as there could be periods of little to no rainfall. Due to the predicted warmer than usual temperatures, farmers are also advised to remain hydrated while working outdoors and provide adequate water and shading for seedlings and livestock during warm days.

Tourism: Outdoor activities could be disrupted at times during rainfall activity. During warm days, visitors should remain hydrated and be mindful to minimize skin exposure and wear sunscreen protection. Avoid the frequent rough sea swells during this time of the year. Visitors should also be aware of the frequency of Saharan dust episodes during this period as it can pose respiratory concerns.
